

COMPLETE TMS TREATMENT IN ONE DAY

A new path forward for depression when medication hasn't provided enough relief.

- Non-invasive
- FDA-cleared
- Medication-free

What Is TMS?

TMS uses gentle magnetic pulses to stimulate the areas of the brain involved in mood regulation. Unlike medication, TMS works directly on brain activity.

3M+ Patients treated worldwide

60M+ Treatments delivered

15 minutes Typical session time

Accelerated One-Day TMS Protocol

NeuPath offers an advanced protocol that allows many patients to complete the entire course of TMS treatment in one visit instead of several weeks of daily appointments.

90% Response Rate

79%+ Remission Rate

FREQUENTLY ASKED QUESTIONS

- Q Is TMS painful?**
TMS is a painless procedure performed while patients are awake and alert, and requires no anesthesia. While some patients may report some scalp discomfort, this usually subsides after the first week of treatment.
- Q When will I start seeing results?**
Most patients notice changes between weeks 2-4. The full benefit can continue developing 3-6 months after treatment ends as the brain keeps forming new connections.
- Q Do I need to stop medications?**
Do not stop taking prescribed medications without consulting your doctor first. Abruptly stopping can be dangerous, cause withdrawal symptoms, or trigger a return of symptoms.
- Q Can treatment really be completed in one day?**
Yes, certain treatments can be completed in a single day, particularly due to advancements in technology and specialized procedures in dentistry and certain cancer therapies.

TREATMENT OPTIONS

One-Day TMS

- 20 sessions
- Completed in one visit
- No daily commute
- \$3,500 full treatment

Insurance -Covered TMS

- 36 sessions
- 7-8 weeks
- ~15 minute visits
- Covered by most insurance
